

DEEP VISIBILITY PAST, PRESENT & FUTURE

AUTOMATED DOCUMENTATION & BEYOND

Make your documentation actionable with alerts and reporting. As an MSP, you're managing an increasing number of systems across the cloud, network, apps and servers. Documenting these systems requires significant manual work for data that will become stale. We bring automation into the equation, giving you continuous visibility into system changes.

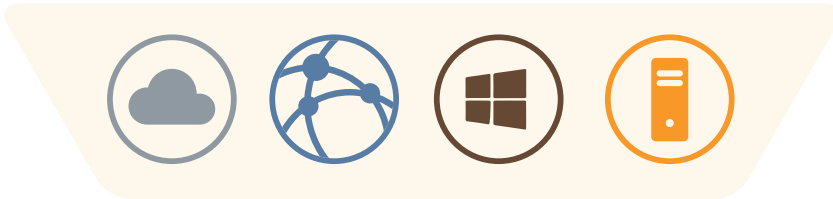

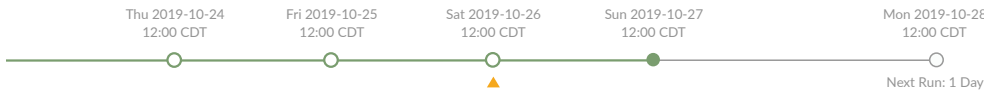

With Liongard, get always up-to-date documentation that alerts you when something needs your attention and enables your MSP to report on systems at scale.

"Roar's automation is freeing up a whole person in our NOC. It's a second set of eyes, doing the things we'd normally have to do manually,"

Drew Hill, Vertikal6

"Documentation is boring. Automation is Roaring."

Vin

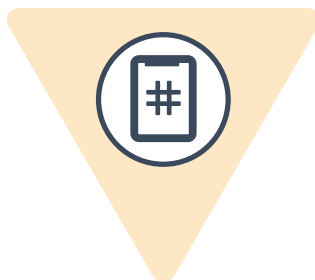

AUTOMATED DOCUMENTATION

- Always up-to-date
- Deep data across the stack
- Historical audit timeline

ACTIONABLE ALERTS

- Monitor best practices
- Detect critical changes
- PSA ticket integration

REPORTING & METRICS

- Cross-customer reporting
- Deep exportable data
- API and BrightGauge integration

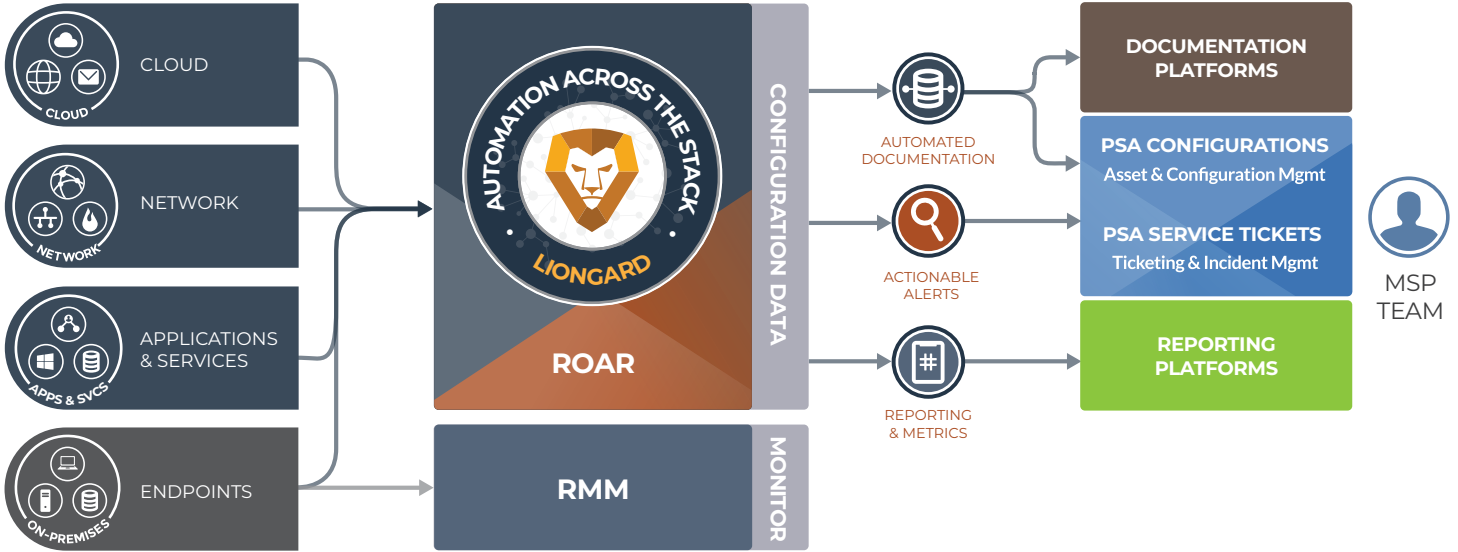

ROAR INSPECTS SYSTEMS ACROSS THE STACK

AUTOMATED DOCUMENTATION IN ROAR, CONNECTWISE, REPORTING & DOCUMENTATION PLATFORMS

This section displays three screenshots of monitoring and management tools:

- ROAR Dashboard:** Shows system details for an Active Directory environment, including domain name (liongard), mode (Windows 2016 Domain), controllers (EC2AMAZ-11K500L), and user statistics (Total Users: 16).
- ITGlue Dashboard:** Provides a comprehensive overview of users and devices, including a table of user counts and a detailed view of system metrics like free physical and virtual memory.
- BrightGauge Dashboard:** Displays environmental health metrics, such as a score of 40, and includes charts for system status and detection lists.

★★★★★
Roar empowers us to see what happened, and when, across many different vendors. Something never achieved before at this scale and price point. Let the competition hear you Roar.
