Vade Secure receives and analyzes a copy of reported messages and uses the information to improve the accuracy of its filter.

Thanks to this feedback loop, the more you and other users report, the more effective Vade Secure for Microsoft 365 is for all.

Hackers are continuously evolving their attacks to break through security layers.

Even with an advanced email filter in place, a threat could still reach your inbox.

Do not fret! You can help! Whenever you see a suspicious email, report it by clicking the Microsoft Outlook Junk or Phishing button.

It’s that easy!

As a Vade Secure for Microsoft 365 user, your Junk and Phishing buttons do more than remove suspicious messages from your inbox – they connect directly to Vade Secure!

Vade Secure receives and analyzes a copy of reported messages and uses the information to improve the accuracy of its filter.

GET IN THE LOOP: REPORT MALICIOUS EMAILS WITH ONE CLICK
