Effective security reduces risks during digital transformation

HPE Pointnext Services helps to improve the overall security posture of your digital transformation programs by remediating the security risks that your business assets are exposed to.

61% believe attacks inside the network will do the greatest damage

The greatest threats are attacks on the inside

Detect ransomware and gain a 360-degree view of security from manufacturing and supply chain through end-of-life decommissioning with HPE Gen10 servers’ advanced security features, now available as-a-Service.

HPE designs security into everything we do, to help you securely transform business, data, apps and experiences, to close IT security gaps.

HPE embeds zero trust security into our infrastructure, software and networking solutions, helping you secure your critical assets, data and apps where they are—without adding complexity.

AI is helping to solve security challenges

Aruba ClearPass provides AI-powered visibility and industry leading policy enforcement to manage and control access for mobile and IoT—on any vendor’s wired and wireless networks.

77% of security experts are involved in digital transformation projects

59% of companies believe security technologies are important to successful digital transformation

59% believe security is a challenge to limit users from accessing unauthorized data and apps.

WHAT’S THREATENING IT SECURITY AND WHAT ARE PEOPLE DOING ABOUT IT?

The Ponemon Institute surveyed 1,500+ IT security leaders, and practitioners and here’s a glimpse at what they found.
