

How to put safety first in the post-lockdown world

If the last few months have taught us anything, it is that the world will be a different place post-lockdown.

No place will feel this more than at schools, where the safety of our children will become even more paramount. Schools will be required to put health and safety at the

forefront of all operations, and to implement stringent measures to limit the spread of the coronavirus. Being able to efficiently communicate and update important health and safety information through real-time updates, while finding ways to ensure classroom safety without disrupting students' learning experiences will therefore become a key challenge that schools will need to solve once schools reopen.

A post-lockdown essential for schools

Airtame's unified platform for sharing information across screens provides numerous leading solutions to effectively create a safe environment for students, teachers and staff alike.

Communicating in shared spaces

Hallways, lobbies, cafeterias and libraries are high-risk infection areas due to the large number of people that will use them throughout the school day.

Airtame provides a range of different options to tailor safety content across your campus, so you can nudge students to comply with up to date safety regulations and to update them with relevant information at all times.

Classroom Collaboration

Numerous new studies suggest that coronavirus can survive on metal, glass and plastic surfaces for days. This means that old classroom favorites like shared devices, cables and dongles will be discouraged in the post-lockdown world. With Airtame, we provide a screen mirroring solution

that works with all computer and mobile operating systems, that enables students and teachers to share straight from their own devices. This means there is no need to touch other devices than their own, and no need to move to the front of the room to share content, creating a safe, collaborative classroom environment.

Remote Screen Management

It's not just students and teachers who will need to abide by the new safety regulations in the post-lockdown world.

IT personnel will also need to stay safe. With the heightened importance of safety messaging, maintaining screens with up-to-date messaging will become an almost daily task.

For IT workers, being able to do this from the safety of their own office, or even from off-site, will become even more important than before. No more traveling across campus updating screens manually, just simple, effective, remote screen management.
