

# Meet Windows Autopilot.

An easier way to set up devices for educators, staff, and students.

## Simplify device setup.

Students power on their devices, connect them to the internet, and sign in. Windows Autopilot automatically configures each device from the cloud.

## Ensure PCs are up-to-date and secure.

Student PCs always get configured with the latest Intune policies and apps, avoiding custom images and provisioning packages.

## Save time and resources.

Students and teachers can use devices right out of the box without requiring heavy lift or provisioning from IT.

## Quickly reset and reconfigure devices.

Initiate a remote Windows Autopilot Reset from Intune for Education. After all apps, settings, and user data are removed, PCs receive the latest Intune policies.
