Microsoft 365

Work from home, be safe, stay productive

COVID-19 is changing our world quickly. To protect our health, many around the world are working remotely. Microsoft delivers vital tools to enable people to stay connected and work from home securely.

Meet and collaborate

Enable employees to participate in interactive online video meetings, chat with colleagues, and collaborate in real time across desktop, web, or mobile.

Engage with virtual events and communications

When people can't gather in the same place, it's critical to find innovative ways to create human connection. Move your events and communications online to help your employees stay connected with leadership, customers and each other.

Work confidently with Surface & partner devices

Employees' workspaces are shifting from office to home. Set them up with Surface and partner devices that are purpose-built, secure and designed for any space and working style.
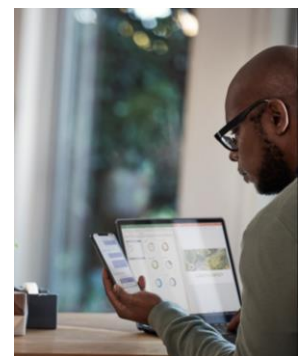

Be productive on any device

As people's work and life routines change, it is more important than ever to enable productivity in real time across devices. Enable people to check emails, access calendars, and create, edit, and collaborate on documents no matter where they are.

Manage and secure remote access

Ensure devices and apps stay up-to-date, compliant and secure, whether company or user-owned. Protect your data on any device, and quickly deploy and scale remote desktops and critical business applications.

Enabling secure remote work

> *"...we can work from anywhere with internet access, and it is business as usual. This new work model requires a change of culture that is possible, thanks to the digitalization as well as the ease of teamwork, with tools that allow us to be always connected and available during our working day. I have everything updated in OneDrive..."*

Helmuth Corzo Gutierrez, Sales and Retail Manager (Colombia) for Telefónica

How Microsoft can help you enable secure remote work?

Microsoft Teams

The collaboration hub for remote work: chat, meet, call, and collaborate on documents all in one place.

Microsoft 365 Live Events

Broadcast large online events to employees, customers and more using Teams, Yammer or Microsoft Stream.

Power Apps

Low-code app development to help you automate workflows to support remote workers. Deploy apps to Microsoft Teams for rapid scale and adoption.

Surface and partner devices

Surface and partner devices range from audio and video peripherals to PCs for the best and most secure experiences.

Microsoft 365 Apps
(formerly Office 365 ProPlus)

Office apps to stay productive no matter where you are. Install on up to 5 PCs+5 tablets+5 phones. Access files from anywhere with 1TB cloud storage.

Windows Virtual Desktop

Quickly deploy virtual desktops and apps to help users stay productive on any device, anywhere.

Microsoft Endpoint Manager

Enable remote work securely from company-owned and personal devices. Protect company data, deploy apps, assess risk, update and patch all endpoints.
