

Work-from-Home Kit for your Business

NETGEAR
BUSINESS

As your business moves to a more remote-friendly working environment, NETGEAR understands that you need to maintain your employees' productivity at a high level. And productivity starts with quality of communication between employees and access to information. But remotely setting up your employees to effectively work from home is not easy.

Difficulties you and your employees may encounter while setting up a work-from-home network:

Employee technical insight : employees may not have the knowledge to create a clean, noise-free, dedicated, high-bandwidth WiFi connection for work that co-exists with their home WiFi environment.

Security: employees use their home WiFi networks that often have low security measures putting your company data at risk.

Support and troubleshooting: it may be difficult for employees to debug network problems when they occur without access to immediate resources.

Flexible workspace: employees need connectivity that covers the entire home while competing against other family members on WiFi bandwidth, reducing your employee's effectiveness.

NETGEAR now offers a Productivity Kit - a bundle of networking products that allows your business to quickly set up a high-quality WiFi network for your employees, maintain a high level of communication quality, and provide standardized and continuous support for your employees' at-home networking needs. The kit includes a pre-set number of WiFi access points, and an Insight management solution that can remotely configure the WiFi device and setup the wireless network in your employee's network. Best of all you can do it centrally in one-go across all your employees' devices. Insight also enables you to continue to remotely monitor and support the WiFi access points to be installed at your employees' homes.

The Work-From-Home kit greatly enhances your employees' productivity at home, while giving you the ability to perform IT support remotely.

Solved with NETGEAR's Work- from-Home Kit

Provide each employee with one WiFi Access Point that provides a dedicated WiFi connection for home working. Through NETGEAR Insight you have the ability to remotely setup, configure and manage your employee's connection to keep them online. Here are some of the benefits your business receives from the Work-from-Home kit:

Improve security. Increase efficiency. Centralized management

Network admin in the office can remotely manage and configure WiFi settings in the employee's home including full visibility into the WiFi neighborhood

Centrally managed firmware updates as needed

Start NETGEAR's Work-from-Home Kit

1. Purchase the Work-from-Home kit
Kit includes a number of high performance 802.11ac Dual Band WiFi access point (WAC510) + 1-Year of Insight management - see table below
2. Create your business Insight account and configure all units without opening the box
3. Ship out the devices to your employees' homes for them to simply plug them in
4. Set up device configuration and SSID settings automatically and remotely by Insight
5. Employee connects WAC510 to an existing network and follows simple steps to set up their WiFi
