

Replace thin clients with virtualization on ChromeOS

With ChromeOS, set your organization up for the future of work as you migrate to a cloud-first workforce and decrease legacy dependencies.

-  Deploy ChromeOS 63% faster than other operating systems¹
-  Save employees up to 45 minutes per device deployed¹
-  ChromeOS devices cost 44% less over three years, providing cost savings, time efficiencies, and productivity gains worth an average of more than \$1,700 per device over three years¹

“

The combination of Chromebooks and Citrix provided our employees with the flexibility and security to access Synchrony business applications remotely. We knew if we could enable those logins remotely and securely, then remote work could move forward. Our intention is to use Chromebooks as the primary device for employees, even when they return to the office.”

Greg Simpson, CTO at Synchrony Financial

Access to apps employees need

- Access legacy Windows apps through VDI services like Citrix, VMware, Cameyo, Nutanix and Workspot.
- Access cloud-based apps through the browser by logging in with a Google Cloud Identity or third

Fast device deployment & manage remotely

- Deploy fast with no imaging required, as devices automatically download apps, settings, and bookmarks stored in a user's cloud profile
- Gradually roll out security and feature updates to devices or set to automatically install
- Manage devices, control updates, and set 600+ policies from anywhere, even remotely, through the easy to use Google Admin console
- Remotely disable devices if they are lost or stolen and post a message that lets the finder know where to return it

Built-in and proactive security

- Keep devices secure with Google's built-in Titan-C security chip and virus protection.
- Additional layer of protection with encrypted storage and verified boot that ensures the OS has not been tampered with.
- Learn more about ChromeOS security [here](#).

Better employee experience

- Reduce employee interruptions and downtime with updates that install in the background
- Give employees more choice with a wide range of modern devices

Stay prepared for the future

- Future-proof your investments as you prepare to move workers to cloud-based apps
- Enhance mobility with versatile devices that help your organization adapt to more flexible or remote way of working
- Reduce your legacy and Windows device footprint
