Businesses of all kinds need to adopt strategies and technologies that allow a safe return to operations. The BDS-8 Temperature Screening Kiosk uses advanced thermal imaging AND facial recognition to identify potential security threats and help mitigate large-scale exposures to sickness.

Upon entry, the standalone BDS-8 Kiosk automatically and without contact, scans for temperature in less than a second with an accuracy of +/-0.9 °F (+/-0.5 °C). If the kiosk detects an elevated temperature, on-screen an optional audio alerts go off. Facial recognition technology and a storage capacity up to 30,000 faces, the BDS-8 also functions as a check-in and check-out system for registered users. Facial scanning can also deny access to strangers and detect if people are wearing masks. Integrate BDS-8 into any existing door or ticketing system for automated/contactless access to facilities.

Designed to work 24/7 right out of the box, the BDS-8 Temperature Screening Kiosk is a fast, reliable and affordable solution for businesses that need to provide a safe and healthy environment for employees, visitors and guests.

Benefits & Features
- Automated, Contactless
- Accurate Facial Recognition
- Works with ANY Door or Ticketing System
- Remote Management Software
- Flexible By Design
- 8" LCD Display
- Commercial-Grade, Waterproof, Dustproof design
- Height Adjustment
- Built in Speakers

Safely protect your business with Contactless Temperature Screening

Businesses of all kinds need to adopt strategies and technologies that allow a safe return to operations. The BDS-8 Temperature Screening Kiosk uses advanced thermal imaging AND facial recognition to identify potential security threats and help mitigate large-scale exposures to sickness.

Upon entry, the standalone BDS-8 Kiosk automatically and without contact, scans for temperature in less than a second with an accuracy of +/-0.9 °F (+/-0.5 °C).
